# pH SCALE OF WATER

- The pH of purified water is usually between 5.5 and 6.5, with 7 being neutral and anything below that being acidic. We have been drinking this water for years, and we never got educated about pH of Drinking water.
- Essentially, drinking water with a pH of 7.5 or higher is beneficial and safe. With humans eating and drinking acidic water, it is not good for their health. drinking acidic drinks, along with increased pollution. Drinking water with a slightly higher pH, i.e., alkaline water, is good for health and works as a countermeasure to acidic food, drinks, and pollution.

# TDS IN PPM

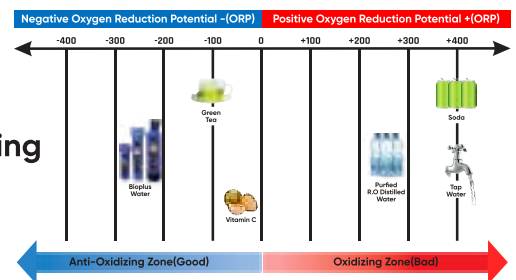

- TDS is basically total dissolved solids. Basically, purifying water involves decreasing the TDS of the water. TDS consists of dissolved solids, including impurities and minerals. TDS is drastically reduced when water is purified, which brings down the minerals as well. **And hence, we offer products that replenish the only minerals our bodies require.**
- Some purifiers have a TDS controller that basically bypasses the water, letting the TDS be on the higher side. **But this can have impurities, which are dangerous. Hence, we should completely purify the water, bring down the TDS to as low as possible, and then add the essential minerals.**

# OXI-DATION SCALE

- The oxidation Reduction Potential of a liquid indicates if the liquid is oxidizing or antioxidizing. ORP of purified water has a positive ORP of around 250 mV.

- Our Products decrease the ORP levels and tries to bring in the negative range, **indicating the water acting as an antioxidizing agent.**

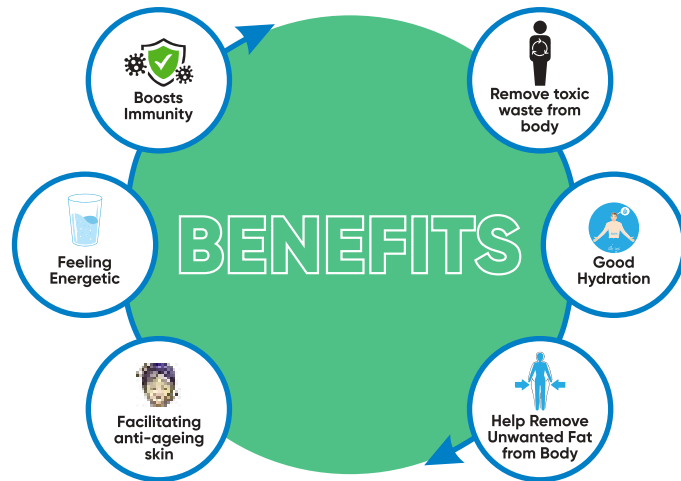

- Drinking Antioxidant water has several benefits just like consuming any other Antioxidant substances.

# HYDROGEN GAS

- Drinking Molecular Hydrogen or even inhaling Hydrogen has an end number of benefits. Basically, it helps reduce inflammation & oxidative stress in the human body. The reduction of oxidative stress is done by the Hydrogen giving the lost electron to the free radicle a.k.a. dead cell.
- Drinking Hydrogen-rich Water is one of the best things one can do.

*\*To obtain the negative ORP and hydrogen levels, drink the water immediately after passing through the products. Water's pH, minerals, and taste are preserved for a long time.*

## pH+/- OF DRINKING WATER

- pH of other range than the drinking water has number of uses. From cleaning fruits & vegetables, cleaning dishes (Eliminating the use of detergent), cleaning floor, and much more.
- We provide pH tester with almost every product at our facility lab to test the water you drink.
- Our products also drastically improve the taste of water.

# WATER PURIFIERS

Reverse osmosis is a common process to purify contaminated water by forcing water through a membrane. Water produced by reverse osmosis may be used for a variety of purposes, including desalination, wastewater treatment, concentration of contaminants, and the reclamation of dissolved minerals.
